scraplights®

Handcrafted from recycled cardboard, Graypants' flagship Scraplights provide warm, intimate, and functional lighting for any occasion or space. Tough and elegant, each is precision cut with a laser and assembled by hand using non-toxic adhesive, and all Scraplights are treated with a non-toxic fire retardant.

hive and nest

Hive and Nest are new additions inspired by our natural surroundings. Their shapes are tilted, which not only creates a different light perspective, but also a new angle on the original Scraplights shapes.

tilt series

Each Tilt lamp features a sturdy steel powder-coated frame, textile wrapped cord, bottom felt pad, and durable rocker switch. Easily interchangeable and secured into place using two heavy-duty knurled thumbscrews, our signature recycled cardboard shades make these the perfect warm accent for that lonely table, dark corner, or blank space.

frame series

Scraplights Sun installation at Hirakata T-SITE, Osaka, Japan
Photo © Yasushi Ichikawa

The Scraplights Frame Series combines the classic layered cardboard aesthetic with a steel frame and a frosted glass diffuser. This provides excellent top and bottom lighting for large spaces such as lobbies and conference rooms. The Dome pendant combines half of the well-known Sun32 design with an even larger diffuser, making it ideal for any open office space.

scraplights® white

Using custom-made entirely white corrugated cardboard, the Scraplights White series abstracts and elevates the layered cardboard aesthetic that Graypants has been carefully evolving since their beginning. This radical departure from the traditional Scraplights Series is precision cut by advanced machinery, assembled by hand using non-toxic adhesive, and treated with a non-toxic fire retardant coating.

kerflights®

Inspired by tried and true handcrafting techniques, the Kerflights series is precision built to accommodate any situation. Durable powder coated steel wire frames provide a distinct shape and character for each lamp. The shades are crafted from FSC-certified high quality plywood with a unique kerf pattern cut into the panels allowing for intriguing patterns to be cast onto walls and table surfaces. The magic in the Kerflights series lies within the flexibility of the design. The shade panels are swappable and reversible, allowing for future possibilities over their long lives.

chrona[™] series

Light reflecting light

Mimicking the phosphorescent envelope found around stars, Chrona lights create a luminous glow by combining spun brass and diffused acrylic. With a variety of configurations in both horizontal and vertical orientations, Dish pendants can be clustered together to make stunning constellations or individually hung to accentuate any space. Thin, yet robust, the debut pendants are available in diameters ranging from 6 to 17 inches.

loci™ installations

Loci, which in Latin means 'centralized sources of power,' refers to the series' innovative method of achieving hundreds or thousands of singular points of light in an installation. Rather than using many individual bulbs, which would gobble energy and require frequent maintenance, Loci installations are powered by only a small handful of ultra-bright, energy-efficient LEDs.

Loci installation at Cove, Seattle, WA

Fiber optic cables flawlessly carry the light from the hidden light sources, dispersing it to the ends of the fibers. Frosted acrylic catches and diffuses the light, imparting a candlelit glow.

Loci installation at Canvas, Seattle, WA

Pendants are available in acrylic and brass varieties

prop ceiling system™

The Prop panel is a perforated steel unit, which can be combined in numerous combinations to create a wide variety of ceiling systems. The strength of the Prop panels lies in their ability to be endlessly combined into a Prop Ceiling System, accommodating integrated lighting and acoustical needs.

murmurations installations

Murmurations are custom installations inspired by a breathtaking natural phenomenon. Flocking is considered an emergent behavior arising from simple rules that are followed by individuals without any central coordination. By creating our own simple design rules, we are able to create dynamic light installations comprising of a single layered cardboard pendant. These chandeliers are scalable from few to many pendants and can be customized to accentuate any space.

Graypants' Murmurations chandeliers are designed to complement any type of project. These are available as project-specific custom installations of any size using our standard Moa pendants.

cloud installations

In clouds, some see darkness. We see light. Hand-crafted from as many as 30,000 ping-pong balls, each cloud chandelier is as unique as the environment in which it hangs. With fully programmable LED color lights, they are luminous, supple and constantly in motion – just like an afternoon cloud that gently drifts through the day.

wave panels

Commercial and residential panel partitions should inhabit a space, not divide it. Responsibly crafted from recycled cardboard, Wave Panels re-imagine how we use space. With inherent acoustic properties and stunning visual effects, the multifunctional sculptural panels are custom-designed with varying levels of translucence, yielding privacy without isolation. Wave Panels are also fully compatible with standard ceiling systems, affording an elegant upgrade to acoustic ceiling tiles. Freestanding residential tri-fold room dividers are also available.

ice press kit

The first countertop product from Graypants, the Ice Press is designed to uniquely enhance your cocktail experience. Utilizing the thermal properties of aluminum, it creates beautiful spheres of ice that seem to never melt. This product is the key to crafting a perfectly chilled drink, leaving the notes and characteristics of your spirits undiluted. The Ice Press is graceful in function and appearance, adding a delightful twist to the way your cocktail is prepared and enjoyed.

The Ice Press is made entirely in Seattle, Washington. It is machined from solid aluminum, with a food-safe black anodized finish, and detailed with stainless steel.

Each kit includes the aluminum Ice Press, stainless steel drip tray, tongs, ice molds, and a cotton bar towel.

garage

Garage is Graypants' award-winning debut architectural project. Set as a residential cabin, the building is a careful balance of preserving the memory of the existing structure and repurposing the materials extracted from it.

Classical and modern elements have been merged to celebrate the beauty of everyday interactions, such as entering through the solid Corian sliding speakeasy cabinet, illuminating the stretched canvas walls with a mobile phone, revealing hidden beds beneath wooden floor panels that fold into seating, and lighting the century-old wood burning stove.

Garage aims to make design mysterious, making mundane tasks of our lives into opportunities that create beauty through joyful interaction. The new becoming a theatre to watch the old before gradually fading away. This space isn't about ordinary, it's about touching on boundaries of what is ordinary.
